We extend our gratitude to Richard Askey, Emeritus Professor of Mathematics at the University of Wisconsin-Madison, and Madge Goldman, President of the Gabriella and Paul Rosenbaum Foundation, for their invaluable guidance during the development of Primary Mathematics (Standards Edition). We also acknowledge the significant contribution made by Jennifer Kempe, Curriculum Advisor at Singapore Math Inc., to this educational program. The Primary Mathematics (Standards Edition) is a comprehensive curriculum designed to equip students with strong conceptual understanding, critical thinking skills, and efficient problem-solving abilities. The program introduces mathematical concepts in an engaging manner and ensures mastery through specific learning tasks that facilitate immediate assessment and consolidation. To encourage active student participation, the color patch II is used to initiate lively discussions about the taught mathematical concepts. The Concrete --+ Pictorial --+ Abstract approach enables students to develop a deeper understanding of mathematics by translating concrete skills to abstract ones. New mathematical concepts are introduced through a spiral progression that builds on previously mastered concepts. Metacognition is employed as a strategy for learners to reflect on their thinking processes during problem-solving, making even complex problems accessible. The pencil icon provides quick reference from the Textbook to relevant Workbook pages, facilitating focused review and evaluation. Regular reviews in the Textbook consolidate learned concepts, while the glossary effectively combines pictorial representation with simple mathematical definitions to provide a comprehensive reference guide for students.
